Notes:

In the HD44780, the data can be sent in either 4-bit 2-operation or 8-bit 1-operation so that it can interface to both 4 and 8 bit MPU's.

- (1) When interface data is 4 bits long, data is transferred using only 4 buses of DB₄~DB₁, and DB₀~DB₃ are not used. Data transfer between the HD44780 and the MPU completes when 4-bit data is transferred twice. Data of the higher order 4 bits (contents of DB₄~DB₁, when interface data is 8 bits long) is transferred first and then lower order 4 bits (contents of DB₀~DB₃, when interface data is 8 bits long).
- (2) When interface data is 8 bits long, data is transferred using 8 data buses of DB₀~DB₇.
